MULTIPLICATION

Write the following as multiplication statements.

MULTIPLICATION ON THE NUMBER LINE

Example : Multiply 4 by 5.

Multiply the following using the number line.

MATHS LAB

Objective : To learn and reinforce the concept of multiplication

Materials Required : Bingo cards, Pencils, Crayons for all students

For example,

This is a bingo card.

Steps :

18

- 1. Give each student a card like the one shown above, with 6 circles in each card.
- 2. Ask the students to write any 6 multiples of 3 in the circles.
- 3. Give a crayon to each student. Start calling out the multiples of 3 in any order. If a student has one of the called out numbers in his card, then he should colour that circle.

There are 3 ways of completing first.

- The three corners
- Each row
- All the circles

It is an excellent way of finding out if they know all the multiples of a given number. The game could be played many times to help every child get a chance to complete first.

MULTIPLICATION FACTS

When a number is multiplied by 0, the answer is always zero.

$$2 \times 0 = 0$$
 $14 \times 0 = 0$ $19 \times 0 = 0$

When a number is multiplied by 1, the answer is the number itself.

 $7 \times 1 = 7$ $12 \times 1 = 12$ $22 \times 1 = 22$

A change in the order of the factors does not change the answer.

 $3 \times 4 = 12$ $4 \times 3 = 12$

Fill in the blanks.

MULTIPLICATION OF A 2-DIGIT NUMBER WITH A 1-DIGIT NUMBER

Example : Multiply 23 by 2.

Step 1 : Multiply the digit 3 in ones place by 2 and write the answer in ones column.

$$(3 \times 2 = 6)$$

Step 2 : Multiply the digit 2 in tens place by 2 and write the answer in tens column.

$$(2 \times 2 = 4)$$

So,
$$23 \times 2 = 46$$

Find the product.

MULTIPLICATION OF A 2-DIGIT NUMBER WITH A 1-DIGIT NUMBER (WITH CARRYING)

Example :	Multiply 27 by 3.
Step 1 :	Multiply the digit 7 in ones place by 3.
	$7 \times 3 = 21$ (2 tens + 1 one)
	Write 1 in the ones column of the answer.
	Carry 2 tens to the tens column.
Step 2 :	Multiply the digit 2 in tens place by 3.
	$2 \times 3 = 6$ tens
	Add 2 tens (carried from the ones column)
	6 tens + 2 tens = 8 tens
	Write 8 in the tens column.
	Answer is 81.

Find the product.

MULTIPLICATION OF A 3-DIGIT NUMBER WITH A 1-DIGIT NUMBER (without carrying)

Example : Multiply 224 by 2.

Step 1 : Multiply the digit 4 in ones place by 2. 4 ones $\times 2 = 8$ ones. Write 8 in the ones column. Step 2 : Multiply the digit 2 in tens place by 2.

2 tens \times 2 = 4 tens. Write 4 in the tens column.

Step 3 : Multiply the digit 2 in hundreds place by 2. 2 hundreds \times 2 = 4 hundreds. Write 4 in the hundreds column. Answer is 448.

Example : Multiply 224 by 3.

Step 1 :	Multiply the digit 4 in ones place by 3.
	4 ones \times 3 = 12 ones. (1 ten + 2 ones)
	Write 2 in the ones column.
	Carry 1 ten to the tens column.
Step 2 :	Multiply the digit 2 in tens place by 3.
	2 tens \times 3 = 6 tens.
	Add 1 ten carried from the ones column.
	6 tens + 1 ten = 7 tens.
	Write 7 in the tens column.

Step 3 : Multiply the digit 2 in hundreds place by 3. 2 hundreds \times 3 = 6 hundreds Write 6 in the hundreds column. Answer is 672.
